Office Contact Information

1126 E. 59th Street – Saieh Hall for Economics

Chicago, IL 60637

Office and/or cell phone number: 312 477 9986

Placement Directors: Professor Ufuk Akcigit, uakcigit@uchicago.edu, (773) 702-0433

Professor Manasi Deshpande, mdeshpande@uchicago.edu, (773) 702-8260

Graduate Student Coordinator: Amy Schulz, aschulz@uchicago.edu, (773) 834-1972

Education

The University of Chicago, 2016 to present

Ph.D. Candidate in Economics

Thesis Title: “Aggregate effects of talent allocation: Evidence from the Finnish comprehensive school reform”

Expected Completion Date: June 2022

Ph.D., Mathematics, Aalto University, Finland

M.S., Mathematics, New York University

M.Sc., Mathematics, University of Oulu, Finland

Teaching and Research Fields:

Primary fields: Labor Economics, Macroeconomics

Secondary fields: Applied Econometrics, Macro-Finance

Teaching Experience:

Spring, 2021 Economic Policy Analysis, University of Chicago, Instructor

Autumn, 2019 Economic Policy Analysis, University of Chicago, Instructor

Autumn, 2019 Macroeconomics (MBA), Chicago Booth, Teaching Assistant for John Huizinga

Summer, 2019 Macroeconomics (MBA), Chicago Booth, Teaching Assistant for John Huizinga

Spring, 2019 Economic Policy Analysis, University of Chicago, Teaching Assistant for Kotaro Yoshida

Winter, 2019 Investments (MBA), Chicago Booth, Teaching Assistant for Niels Gormsen

Autumn, 2018 Macroeconomics (MBA), Chicago Booth, Teaching Assistant for John Huizinga

Summer, 2016 Differential Equations, University of Jyväskylä, Finland, Instructor

Research Experience and Other Employment:

2019	Research assistant for Niels Gormsen
2015 – 2016	University of Jyväskylä, postdoctoral researcher (mathematics)
2012 – 2015	University of Helsinki, Academy of Finland postdoctoral research fellow (mathematics)
2010 – 2012	The Boston Consulting Group, Associate

Honors, Scholarships, and Fellowships:

2021	Yrjö Jahnsson Foundation Graduate Grant
2020	Data Acquisition Grant, University of Chicago Dept. of Economics
2017	CRSP Summer Research Grant, Booth School of Business
2016 – 2022	Social Science Graduate Fellowship, University of Chicago
2012 – 2015	Academy of Finland postdoctoral research fellowship in mathematics
2007 – 2009	Fulbright Foundation Scholarship
2006	Ernst Lindelöf prize (master's thesis award), The Finnish Mathematical Society

Professional Activities:Referee (mathematics):

Journal de Mathématiques Pures et Appliquées, Nonlinear Analysis: Theory, Methods & Applications, Manuscripta mathematica, Annales Academiæ Scientiarum Fennicæ Mathematica, Journal of Mathematical Analysis and Applications, Applied Mathematics Letters

Conference and Seminar Presentations (economics):

2021	Young Economist Symposium (Princeton)
2021	16 th Annual Economics Graduate Student Conference (WUSTL)
2021	50 th Annual Meeting, Illinois Economic Association
2021	Chicago Joint Program and Friends Conference (UChicago)

Language and Computer Skills:

Computer Skills: R, Matlab, Mathematica

Languages: English (Fluent), Finnish (native)

Research Papers:

“Aggregate effects of talent allocation: Evidence from the Finnish comprehensive school reform”
(Job Market Paper)

Abstract: This paper studies the impact of occupational talent allocation on aggregate productivity and income inequality. I use Finnish administrative microdata to estimate a Roy model of occupational choice with unobservable skill and preference heterogeneity. I show that workers' sorting behavior changes have not driven aggregate productivity growth in the recent past. Holding skill distribution fixed, potential future gains for aggregate productivity by improving sorting are also limited. However, different time trends on occupational sorting patterns explain up to 40% of relative wage growth in certain occupations during 1995 - 2005. In particular, differential occupational sorting between genders explains 3.5 percentage points, or 16%, of the gender earnings gap. When accompanied by changes in the skill distribution, workers' occupational sorting behavior also matters for aggregate output. Removing gender differences in skills would lead to a 28% higher GDP effect than complete

gender equalization with identical sorting patterns. I augment this analysis by leveraging the staggered implementation of the *Finnish Comprehensive School Reform* to discipline another counterfactual exercise. I use the model to decompose the reform effect into its skill and sorting components. I show that the reform's differential impact on women increased aggregate productivity by one percent, half of which was due to the sorting channel.

“A debt-financed real estate boom with an endogenous credit crunch”

Abstract: I investigate the effect of credit relaxation on the real estate market and the broader economy. I develop a new mechanism whereby an exogenous collateral credit relaxation propagates through the financial markets and produces a sustained real estate boom. I emphasize the role of credit-constrained entrepreneurs and the impact of credit relaxation on their abilities to create new businesses. The entrepreneurs use the new debt capacity to purchase business capital, increasing output and housing rents during the boom. However, their relatively high consumption propensities create a reversal, where they eventually liquidate their productive assets to finance higher consumption. Output and the interest rate begin to decrease, resembling an endogenous credit crunch without an exogenous credit shock. My analysis also proposes a novel house price decomposition. I characterize the dynamics of the different components affecting house prices in a closed-form phase diagram. Quantitative analysis suggests that the model can explain the house price boom preceding The Great Recession.

Work in Progress:

“Universities, urbanization, and regional development” with Annika Nivala, Mikko Silliman and Tuomo Suhonen

Abstract: In the 1960s, Finland saw a significant expansion of university education, with several new universities established. We build and estimate a structural gravity model to study the effects of this expansion on the local labor markets, taking into account the reform's equilibrium effects. We use differences-in-differences to identify the reform's effect and consider the counterfactual development of the aggregate economy had the expansion never taken place or had the educational expansion been targeted to existing universities.

“Monetary policy with financial frictions and transaction costs”

Abstract: I consider a heterogeneous agent cash-in-advance monetary model with banks, firms, and monetary authority. Firms make portfolio choices between borrowing, capital investments, and holding liquidity while facing a collateral borrowing constraint. Idiosyncratic random shocks and anticipated liquidity needs force occasional portfolio adjustments, which incur fixed transactions costs. Monetary policy affects the real economy through its impact on the credit market, even in the absence of New Keynesian nominal rigidities.
